

USAMMDA INFORMATION PAPER**PRODUCT: HEMOSTATIC DRESSING**

DESCRIPTION: The Hemostatic Dressing (HD) is intended to provide a revolutionary improvement in the control of severe life-threatening hemorrhage. The goal is to have a dressing that, when applied with direct pressure, will stop severe arterial, venous, or mixed bleeding within four minutes. Utilizing combinations of biologically compatible components that can be put on, or into a casualty, it is intended for use by the combat medic/combat lifesaver and other medical personnel on the battlefield.

PROGRAM RELEVANCE TO THE ARMY: This product supports both the core mission of the Army and the Army Transformation. Of the Army's core competencies, this product supports "Forcible Entry Operations," "Sustained Land Dominance," and "Support of Civil Authorities." In any conflict or civilian disaster, it is an unfortunate fact that there will be casualties with severe bleeding. This product is intended to save soldiers' lives in those situations. The aid man and the combat lifesaver will use it far forward to reduce bleeding and allow the casualty to be evacuated to available medical assets further back, again reducing the logistical burden far forward. This product supports Future Operational Capabilities: MD-02-001 Clearing the Battlefield and MD-02-002 Hospitalization.

ISSUES/ACTIONS:

- The Food and Drug Administration approved the contingency Investigational New Drug Battlefield protocol on 4 December 2002, and the Office of the Secretary of Defense approved the U.S. Special Operations Command (USSOCOM) request to activate the protocol on 8 March 2003. One thousand one hundred and eighty five dressings were distributed to USSOCOM units.
- With the ending of major combat in Operation Iraqi Freedom, numerous personnel changes took place in theater, including protocol study staff members and consented subjects, which necessitated the withdrawal of the protocol. The principal investigator withdrew the protocol on 26 August 2003. There were no documented uses of the HD by USSOCOM medics.
